PYROTECHNIC DISPLAY GENERAL REQUIREMENTS

1. Unless otherwise provided in this Section, any person, firm or corporation filing an application for a permit for a fireworks display ("applicant") and any person, firm or corporation in whose name the permit is issued ("permittee"), shall comply with the provisions of this Section. Applicants shall file a detailed site plan with dimensions showing the display site and location of the discharge site(s), spectator viewing areas, parking areas, fallout areas, nearby buildings and/or overhead obstructions and utilities, and the associated separation distances. Applicant shall also provide mortar size, mortar installation, firing method, and other information relating to the fireworks. The permittee shall not allow spectators, spectator parking areas, and dwellings, buildings or structures to be located within the display site.
2. Permits for fireworks displays shall not be issued for the following zoning districts: Estate, Suburban Estates, Suburban Low, Suburban Medium, or Planned Residential Community.
3. Applicants for a fireworks display permit shall show proof of liability insurance coverage for both personal property and personal injury in an amount of not less than one million dollars (\$1,000,000.00) per occurrence, and not less than four million dollars (\$4,000,000.00) in aggregate.
4. Applicant shall provide proof that the manufacturer and supplier of the fireworks to be used in the display possess the appropriate Federal and/or State licenses and/or permits.
5. The permittee for fireworks display shall comply with the requirements in the current edition of the National Fire Protection Association (NFPA) Standard 1123 and the International Fire Code (IFC). Relative to minimum clearances, fireworks display shall comply with NFPA and IFC. Where unusual or safety-threatening conditions exist, the Fire Marshal is authorized to increase the required separation distances as the Fire Marshal deems necessary to ensure public safety.
6. The permittee shall use best efforts to arrange for fireworks to be delivered to the site on the day of the event. The permittee shall not store fireworks on-site overnight, unless stored in a secured area under the supervision of a 24-hour, on-duty security watch person with special approval of the Fire Marshal.
7. Beginning as soon as the fireworks are delivered to the display site, the permittee shall not allow fireworks to be left unattended, and the permittee shall keep them dry and secure. The permittee shall inspect shells after delivery and any shells that are, or appear to be, damaged for whatever reason shall not be fired. The permittee shall sort and separate, handle fireworks, use ready boxes for temporary storage, install mortars, and perform other activities leading up to the firing of fireworks, in a safe manner. The permittee shall position mortars so that shells are propelled away from the spectators and over the fallout area.
8. Every outdoor display shall be supervised, managed, or directed by an on-site Missouri State-licensed operator. Whenever a hazardous condition exists, the permittee shall immediately discontinue, or cause the immediate discontinuance, of the fireworks display until such time as the dangerous situation is no longer extant.
9. After the fireworks display, the firing crew shall conduct an inspection of the fallout area for the purpose of locating unexploded aerial shells or live components. This inspection shall be conducted before public access to the site is allowed. Any shells found during the inspection shall be handled and disposed of in a safe manner.
10. All fireworks shooters must have a Missouri Division of Fire Safety permit, Missouri Fireworks Display Operator License and Federal Explosives License/Permit.
11. Fireworks displays must conclude by 10:00 P.M.
